# PERFORMANCE REPORT

After running each test you have to repopulate the database .

All the performance test has been executed in the Developer VM with the next configuration:

We have to set the proxy configuration as the following picture to run the test in the Developer VM:
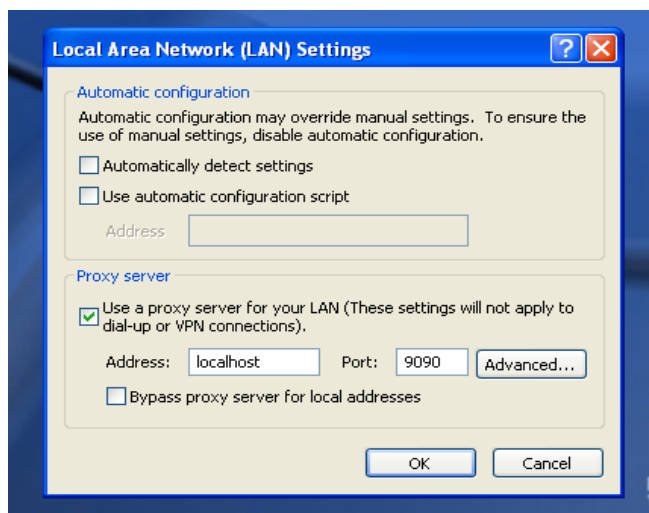

Table of contents

Performance Analysis

All tests where performed with 10 users and 10 loops and the system behaved properly. Nevertheless we tried to run some tests with 10 users 100 loops, we didn't find any error percentage in those tests but they were taking much more time and the 90% Line metric was higher probably because of the limitations of the VM.
